

EMBRAER IS BACK TO THE AUSTRALIAN INTERNATIONAL AIRSHOW WITH A STUNNING ARRAY OF AIRCRAFT

News / Business aviation, Events / Festivals, Manufacturer

Embraer Phenom 100EV and the Phenom 300E business jets, along with the E195-E2 ‘TechLion’ commercial aircraft, will be on display at the Australian International Airshow which starts on 28 February 2023. This will be the E195-E2’s maiden appearance at the Australian International Airshow. There are over 11 business jets and over 40 E-Jets operating in the country, mainly with Alliance Airlines, Airnorth, National Jet Express and Pionair. Several of Alliance Airlines’ E-Jets operate on selected QantasLink routes.

Francisco Gomes Neto, CEO of Embraer, commented: “Australia is home to Embraer’s diverse range of business jets and commercial aircraft and thanks to our customers and partners, our aircraft are synonymous with performance, innovation and reliability. We are proud to have on display the TechLion E195-E2, the Phenom 100EV and the Praetor 300E at the Show.”

Back in July 2022, Embraer and Pratt & Whitney successfully tested a E195-E2 aircraft on 100% sustainable aviation fuel. With 100% SAF, the 25% reduction in emissions can be increased up to an impressive 85%. The E195-E2 also demonstrated its steep approach capability by landing and taking off at London's iconic City Airport (LCY) just after the Farnborough Airshow last year. Airlines such as KLM, Helvetic Airways (Switzerland), Azul (Brazil) and most recently, Porter Airlines (Canada) operate the E195-E2.

The Phenom 300E and the Phenom 100EV that are on display at the Show reflect the popularity of the aircraft in Australia and across the globe. The Phenom 100EV offers the business aviation experience in its purest form while the Phenom 300E sets the highest standard of excellence in the light jet category. Enhanced Phenom 300E is even faster, capable of reaching Mach 0.80, becoming the fastest single-pilot jet in production, and able to deliver a high-speed cruise of 464 knots and a five-occupant range of 2,010 nautical miles (3,724 km) with NBAA IFR reserves. The Phenom 300 series is in operation in 36 countries and has accumulated nearly one million, eight hundred thousand flight hours. It offers the highest residual value of any aircraft in the market. Also, part of Embraer's portfolio of business jets are the Praetor 500 and the Praetor 600, which with best-in-class flight range, are the most disruptive and technologically advanced midsize and super-midsize business jets, capable of continent-crossing and ocean-spanning missions, respectively.

On the topic of sustainability, Embraer is committed to developing products, solutions, and technologies to contribute to the aviation industry's goal of achieving net zero emissions by 2050. Embraer aims to be carbon neutral by 2040 and achieve carbon neutral growth from 2022. It plans to implement 25% sustainable aviation fuel (SAF) use in its operations by 2040 and 100% renewable energy sources by 2030.
