

SMART WAY FOR ESTONIA TO AVOID ILLEGAL STATE AIRLINE SUPPORT?

News / Airlines

2015 was a rough year for Estonia and its national flag carriers. After European Commission concluded the airline had been given illicit state aid, Estonian Air went bankrupt as it could not afford to return the sums – € 85 million. At the same period of time, as a contingency plan, Estonian state established new national flag carrier that would take over all the passengers but with no previous debt or problems. This is how Nordica (initially – Nordic Aviation) was found, as a last resort for a small Baltic country to ensure having a national flag carrier.

“Everybody understands that having national airlines is a much needed thing for every country. As it is known, national carrier, particularly in the beginning, is a huge burden. Especially, if we have in mind that the airlines belong to small countries, such as Estonia. There were quite a few examples on how airlines go bankrupt but the new solution of Estonians gave a small gap for succeeding and it worked,” notices Gediminas Ziemelis, Chairman of the Board at Avia Solutions Group.

Airlines – essential for economy of small country

Aviation industry is extremely important to an annual gross domestic product (GDP) for every country in the world. Air transport can play a key role in economic development and in long term economic growth. As it is calculated, aviation directly brings approximately 1% of the GDP. Let's count, how much Estonia could have lost if they wouldn't have saved their airlines: in 2014 Estonia's GDP was around 21,6 billion, in 2015 – 18,3 billion, in 2016 – around 19 billion and in 2017 – around 20 billion euros.

“The government officials realized that for a small country like Estonia, airlines are essential. Losing national carrier means losing all the airways and possible tourists. That would also isolate the country from basically all the world as it would become more difficult to reach it and it would be a huge damage for the economy. That is why even two months before the European Commission delivered their conclusions of investigation, they have officially stated of founding a new aviation group, in case of bad ruling. A contingency plan was made and it became a saviour of quite a part of Estonian economy,” said G. Ziemelis.

Loophole that saved Estonian aviation industry

At the beginning of operations, Nordica was operating under the name of Slovenian carrier Adria Airways. Now, from November 2016, they have a strategic partnership with LOT Polish Airlines. LOT has 49% of the shares and Nordica is carrying LOT's flight codes and call signs on most of the flights. Although the subsidiary of Nordica - Regional Jet - has an Air Operator's Certificate (AOC), Nordica regular flights currently use the airline codes of LOT, except for flights to Russia. Therefore, up until this day, [Nordica has no AOC of its own and it can be seen in Estonia's Civil Aviation Administration website.\[1\]](#) “Everybody in aviation industry knows how difficult it is to get an AOC and how expensive it is. Besides that, the AOC has one more bad side – it prevents the operator to receive a financial aid from the state. For small countries and moderately small airlines the aid is essential but Estonians learned it the hard way that trying to pull this off in a normal way is impossible,” explained G. Ziemelis, adding that it was a very good strategic move that has built a new company, Nordica, to its success.

Despite some troubles, Nordica is becoming quite a successful carrier. In 2017 they have reached their new record and transferred over 613 thousand passengers, growing the numbers by 63 percent in comparison with 2016. They have expanded their aircraft fleet to 16 planes, created 19 destinations and increased punctuality.

“Nordica – isn't the only one example of such situation. There must be a little coincidence that at the same year, just earlier, Canadian cheap flights company NewLeaf was found and did quite the same thing, just branded themselves as a virtual airline. This way they were able to move around aviation business and operate without an AOC, only attaching themselves to the license of the bigger company. This is more or less the same thing what Nordica did,” explained G. Ziemelis.

About Gediminas Ziemelis

Gediminas Ziemelis is an internationally well-known aviation expert, twice awarded as one of the most talented young leaders in the global aerospace industry under age of 40. In 2016, Gediminas Ziemelis was acknowledged for his visionary and business management and development skills by the prestigious European Business Award jury comprised of EU leaders in economics, education, business and politics. Avia Solutions Group, led by Gediminas has become a national public champion in Entrepreneurship category, earning a spot between top 110 European businesses.

During his carrier he lead 3 companies to IPO, supported and consulted Chinese Banks: total value of transactions in the CIS region – more than USD 2 billion, led a team of experts in a successful working session of the establishment of a Joint Venture with the Henan Province and China Aviation Agency: deal worth USD 900 million, established more than 10 successful startups like: locatory.com, Laserpas.com, skycop.com, aviationcv.com, etc.

Up until today, Gediminas manages private equity fund, which owns assets net worth of 300 million euros in aviation, real estate, IT and pharmacy. He is also a sponsor of various sports, educational, voluntary and charitable organizations projects. Gediminas follows the three simple principles of social responsibility – responsibility towards consumers, employees and society.
