

IC ?ÇTA? CONSTRUCTION BREAKS GROUND ON VIETNAM LONG THANH AIRPORT PROJECT

News / Airports / Routes

With 55 years of experience, IC ?Çta? Construction, which has undertaken many challenging projects both domestically and internationally, took part in the groundbreaking ceremony for the Long Thanh International Airport project with the participation of Vietnam Prime Minister, Pham Minh Chinh. The airport, which will be located to the east of Ho Chi Minh City, is being built by the VIETUR consortium led by the Turkey-based IC ?Çta? Construction. The consortium, which undertook the \$1.5 billion first phase of the project, plans to complete this phase, which includes the terminal building and equipment installations, within 39 months. More than 10,000 employees are expected to work on the Long Thanh International Airport project.

Speaking at the groundbreaking ceremony, which was attended by IC ?Çta? Construction Chairman F?rat Çeçen, Vietnamese Prime Minister Pham Minh Chinh, various ministers, Ambassador Haldun Tekneci of Hanoi, the President of Vietnam Airports Company, senior executives of Vietnamese companies involved in the project, and representatives of local and

international media, Çeçen said: "With this Long Thanh International Airport project, we are bringing our vast experience in construction and management to the Far East. The VIETUR consortium includes leading Vietnamese companies in their respective fields. We aim to deliver the first phase of the Long Thanh International Airport project to international standards within 39 months, in close coordination with our local and international partners. The rapid growth of the country's economy requires major infrastructure investments such as this airport. We appreciate the Vietnamese government's determination to complete such key projects. We also thank the Airports Corporation of Vietnam (ACV) for its fair approach and support during the preparation phase. We believe that ACV's support will play a crucial role in the success of the project.
