

GOGO BUSINESS AVIATION HITS MILESTONE WITH 100TH BUSINESS JET NOW FLYING WITH AVANCE L5 SYSTEM

News / Business aviation

Gogo Reaches Mark in Six Months, Bringing 4G

Experience to 35 Popular Business Jet Models

It took just six months for Gogo Business Aviation (NASDAQ: GOGO), the leading global provider of broadband connectivity products and services for aviation, to reach a major milestone with the 100th installation of a Gogo AVANCE™ L5 system. The install was recently completed by Constant Aviation on an Embraer Legacy 500 for a prestigious mid-west U.S.-based flight department.

More than 275 AVANCE L5 systems have been shipped with hundreds of additional systems on back order and scheduled for delivery in 2018 – highlighting how popular the system has been thus far in the business aviation marketplace. In total, Gogo expects to have approximately 500 installations of the new system by the end of 2018.

AVANCE L5 systems are actively being installed at all MROs and aftermarket OEM service centers. To date, Gogo and its OEM partners and dealers have received type certificate and supplemental type certificate (STC) approvals for AVANCE L5 from the Federal Aviation Administration (FAA) across more than 35 airframes. Gogo and its partners are securing STCs for

more than 25 additional airframes in the coming months, meaning AVANCE L5 will be available for installation on more than 55 business jet platforms.

“The demand for AVANCE L5 has been overwhelming,” said Sergio Aguirre, president of Gogo Business Aviation. “The reports we’re receiving from those who are using L5 have been extremely positive and the system is performing as expected. Our mission now is to get our product manufacturing caught up with the demand, and we’re making tremendous progress on that front every day.”

[Gogo AVANCE L5](#) connects to the Gogo Biz 4G network delivering faster speeds and enhanced network capacity enabling activities such as live streaming video and audio, video conferencing, on-demand movies, personal smartphone use, real-time data for cockpit apps, and remote diagnostics and support while in flight.

“Flight departments, passengers and owners appreciate both the value and the enhanced inflight connectivity experience the AVANCE L5 delivers for everyone on board,” said Jay Rizzo, executive vice president of strategic sales at Constant Aviation. “In addition to the installations completed thus far for Gogo, Constant Aviation has more than 50 AVANCE L5 installations scheduled before the end 2018. We’re pleased to partner with Gogo to help bring this technology to the cabin and improve the quality of air travel through a better inflight Wi-Fi experience.”

Constant Aviation, a premier full-service MRO with a nationwide network, has secured STCs for Gulfstream, Cessna, Embraer and Bombardier airframes.

“The manufacturers, and our dealers and operators saw the value AVANCE L5 could deliver with a proven and reliable network,” Aguirre continued. “We are grateful to the maintenance directors and avionics leads who offered aircraft for the STC process.”

Gogo AVANCE is an innovative software-centric approach that combines Gogo’s advanced hardware and software technology to create a fully integrated, aviation-grade inflight connectivity and entertainment platform. The platform enables connected aviation technologies, services and applications like never before.
