

VISTAJET NOW OWNS 10% OF THE WORLD BOMBARDIER GLOBAL 7500 FLEET

News / Business aviation, Manufacturer

VistaJet and Bombardier celebrated together a milestone delivery of the industry flagship Global 7500 aircraft. The celebration took place at Bombardier Laurent Beaudoin Completion Centre in Montreal on March 29. It marks Bombardier's 100th delivery of the ultra-long-range smooth-flying jet, and VistaJet's 10th, making it the largest operator of Global 7500 aircraft in the world. The event underscores the long-time relationship between the two brands and demonstrates the success of this unparalleled business jet. VistaJet plans to welcome up to a total of 17 Global 7500 aircraft into its fleet by the end of 2022.

Thomas Flohr, VistaJet's Founder and Chairman commented: "We are extremely proud of this landmark moment with Bombardier, as we grow our Global 7500 fleet and meet the growing demand for ultra-long-range solutions. VistaJet is committed to a sustainable aviation future and supporting the global business industry with this expansion. Our enhanced product offering onboard the Global 7500 also guarantees that our clients, whether business or leisure travelers, are given the best and most seamless flying experience. We look forward to welcoming more Members and supporting the business world as our growing fleet of Global 7500 aircraft opens a new era for long-haul private travel."

E?ric Martel, Bombardier's President and Chief Executive Officer said: "I am thrilled to celebrate the 100th delivery of the Global 7500 aircraft with our valued customer, VistaJet. VistaJet recognized early on that this aircraft would transform the business jet industry, and the enormous success of Bombardier's Global 7500 in transforming the private aviation industry. I would like to thank our teams in Montre?al, Toronto and Wichita for designing, building and testing this amazing feat of technology. It's thanks to their talent and dedication that this aircraft has raised the bar for excellence in this sector."

With an industry-leading range of over 7,700nm, the Bombardier Global 7500 aircraft opens up global access in long haul private travel. VistaJet's unparalleled network gives the Global 7500 business jet the space to operate at its peak and opens an extended world of non-stop possibilities for its Members. With VistaJet, passengers can travel long-haul on the Global 7500 to 187 countries worldwide, unlocking access to 96% of the world and some of the most hard-to-reach areas in a single flight.

VistaJet's Global 7500 fleet has already completed a number of incredible non-stop flights, including Sa?o Paulo to the Maldives (15 hours 43 minutes flight time), Los Angeles to Hong Kong (14 hours 50 minutes), St Maarten to the Seychelles (14 hours 45 minutes), Phuket to Vancouver (13 hours 50 minutes), Lie?ge to Jakarta (13 hours 30 minutes), Honolulu to Helsinki (13 hours 30 minutes) and many from the Middle East — including Abu Dhabi to Washington DC (13 hours 50 minutes), Abu Dhabi to Sydney (13 hours 30 minute flight time) and Abu Dhabi to New York (13 hours 10 minutes).

Bombardier's Global 7500 aircraft is the first business jet with an Environmental Product Declaration, offering complete transparency on its performance. It flies at a higher altitude (up to 51,000ft) than commercial jets, where the air is thinner, thus allowing the aircraft to fly faster while burning less fuel. This aligns with VistaJet's commitment to become the first carbon neutral business aviation company by 2025.
