

BRAND NEW HEALTH MONITORING SERVICE LAUNCHED BY SAFRAN

News / Business aviation, Events / Festivals, Manufacturer

Two years after launching the Health Monitoring service that enables customers to track their engines' health indicator, Safran Helicopter has broadened its service offer. The service now has brand new features such as daily health indicators, in addition to the monthly recommendations; full automation of the engine performance trend follow up; and a newly user-friendly online interface. Safran is reinforcing the service's customization possibilities and improves the user experience.

During Heli-Expo, Air Center Helicopters has become the first North American operator to subscribe to the Premium Health Monitoring service.

Safran Helicopter Engines uses predictive analyses and preventive maintenance to preserve the customers' engines and optimize the operations of its customers. This service is based on more than sixty engine parameters that are converted into indicators through our algorithms. With the knowledge of the proximity-based Safran experts, the recommendations are tailored to the customers' operational configuration (missions, environment, etc.). Each Health Monitoring report also benefits from the worldwide fleet experience. Today, Health Monitoring already covers 3,200 engines operated by 500 customers.

Health Monitoring is available for SBH® - Support By the Hour customers in its Premium version. The operators benefiting from the service have seen reduction in costs, particularly in terms of labor, logistics and administration.

Support By the Hour - SBH® now proposes two expert digital solutions: Health Monitoring and Expert Link (real-time visual assistance). SBH® is now digital and fully linked to cost control, engine protection and optimized technical support.

Health Monitoring, Expert Link and SBH® are services that are part of the EngineLife® range, Safran solutions for helicopter engines.

Air Center Helicopters is a US owned and operated small business providing global expeditionary, contingency and conventional aviation services for Commercial and Government Sectors, both Domestic and Foreign alike. With their unparalleled operational readiness to go along with their repeatable performance excellence, coupled by a remarkable safety record, Air Center Helicopters highlights mission profiles to include, but not limited to: austere/remote operations, tactical training support and Casualty Evacuation, Medical Evacuation, Personnel Recovery, Search & Rescue.
