

EXCLUSIVE: BOMBARDIER EYES FINAL CSERIES CERTIFICATION FLIGHT IN NOVEMBER - SOURCES

News / Manufacturer

Canada's **Bombardier** Inc expects to complete the final certification testing of its smaller new **CSeries** narrow-body commercial jet by the week of Nov. 23, a key milestone toward the plane being certified, four sources briefed on the plan said.

The Montreal-based manufacturer declined on Thursday to confirm the testing schedule, but said it still expects certification of the 110-seater CS100 by year's end, followed by the jet's entry into service in the first half of 2016.

The progress of the **CSeries** is being closely watched after years of delays and cost overruns on the program.

Three of the sources, who were not authorized to speak publicly about the matter, questioned whether the previously unreported November timetable could cause the plane and rail-maker to miss its year-end certification goal because of the tight schedule caused by the holiday season.

"Overall, things are looking positive for certification. Any delay will be more administrative than any

sign of major issues," said one of the sources. "As long as no significant technical issues come up, it should be just a few days into the next year."

A second source said certification is still possible by year's end, but everything would have to go perfectly in the certification process, which was rare.

However, Toronto-based Bombardier spokeswoman Marianella Delabarrera said certification will be completed "by the end of the year."

Bombardier's share price has dropped sharply on concerns about demand for the new jets and rising cost of the \$5.4 billion program, which has strained the company's balance sheet.

Richard Aboulafia, analyst with the Virginia-based Teal Group, is forecasting that the jet will go into service in the second half of 2016 with about 10 orders likely next year.

Bombardier needed about \$1 billion to complete certification of the new jet, but would need about \$3 billion in additional funding to help reel in the sales it needs to make the CSeries a success in the highly competitive marketplace, he said.

Loren Thompson, chief operating officer of the Virginia-based Lexington Institute, said the company faced significant financial issues.

"The CSeries is not progressing as expected. I would not be surprised to see Bombardier turn to the Canadian government for assistance given their circumstances," he said.

In May, the company announced plans to raise cash by listing a minority stake in its rail division in Germany.

Bombardier's Delabarrera said the company has not asked for additional money from the Quebec or Canadian governments.

"In addition to running on schedule, we are running on budget," she said.
